

embodiments described herein are not intended to limit the scope and application of this invention.

What is claimed Is:

1. A system for containing exhaust comprised of a collection vessel, filter, compressor and storage vessel with valve.
2. A method of containing exhaust providing a source of exhaust which enters the collection vessel, passes through the filter to be compressed and stored as of claim 1.
3. A method of releasing store exhaust through a valve to be recycled as of claim 1.
